

Halcyon Fujitsu Live Web Training APRIL – MAY 2021 COURSE SCHEDULE *Open Registration*

COURSE LIST

Fujitsu Training Academy courses are designed to provide in-depth, advanced training on technical aspects of Fujitsu HVAC systems. They are designed for individuals already experienced with Fujitsu Mini-splits.

Fujitsu Tech 101

This class is comprised of (2) 4-hour training sessions : [Fujitsu Tech 101 \(Modules 1,2,3\)](#) and [Fujitsu Tech 101 \(Modules 4,5,6\)](#). Attendees must attend the 1st session before the 2nd session. This course provides great information for correct application, product familiarization, proper installation and system function of mini-split systems. These items are critical to end user comfort, system reliability and long-term efficiency. Specific details often missed in the field are highlighted and discussed. The afternoon session begins by familiarizing attendees with the components that start, operate and run the systems. Electronic components are identified and explained. The last 2 sections of the class cover troubleshooting of both indoor and outdoor units. This includes error code identification as well as electronic component testing to know if the part is good or bad.

ETSD (Pre-requisite : Fujitsu Tech 101)

This class is comprised of (2) 4-hour training sessions : [ETSD \(Modules 1 & 2\)](#) and [ETSD \(Modules 3,4,5\)](#). Attendees must attend ETSD (Modules 1&2) before attending ETSD (Modules 3,4,5). Provides in-depth troubleshooting for Halcyon Inverter systems. Training on multi-meters, DC controls and circuits with diagnosis and testing of Fujitsu outdoor unit circuit boards.

RGLX Products, Application, and Installation

This is a 2.5-hour class providing product and application training for the RGLX Halcyon Inverter systems. RGLX medium static ducted units, large cassettes, and new accessories are discussed. Application and airflow will be highlighted.

Multi Position Air Handler Product Overview & Installation (Course 1)

This 3 hour course includes goes over model nomenclature, specifications, efficiency ratings and comparisons, features of the design and accessories as well as installation techniques such as: horizontal conversion, job application, piping, drain installation, electrical wiring of equipment and basic components.

Multi Position Air Handler Auxiliary Heater Install, Setup, and Function Settings (Course 2)

This 2.5 to 3 hour training is intended to provide an experienced installer the ability to understand the setup and startup of a "standard" installation in a cold climate. It is based on the use of a factory accessory electric auxiliary heat kit. It includes function settings and custom setup to match your applications and the needs of your customers. How to set function settings with 3 styles of controls and a quick startup section.

Top 10 Installation Issues

This 2 hour course covers the Halcyon Mini-Split Top 10 Installation and Maintenance issues seen in the field, either at startup or after installation.
